

YEONG TZAW ASSOCIATES INC

YT-88 YT-89 Doll hair stitching machine

Special features & applications:

The operation of the machine is extremely simple and requires no special skill.

This YT-89 is equipped with a new type of special cam.

The rotation noise, in this case, is softer than the previous type.

Replacement of the cutter blades can be easily done as it is fixed by the screw.

The length of stitching hair from 20mm-210 mm is also freely adjustable.

The outer tube is higher than the regular type, therefore, it could be suitable for operation of bigger doll's head.

If the stitching hair length is longer than 8", the stitching speed will be only 600~700 stitching per min.
